

Custom Development

Intrix's professional services team has more than 1700 successful projects under their belt. Projects have included software implementations, custom software modifications, payment-processor integrations and hosted application solutions.

Mobile & E-wallet Integration

Intrix has been on the leading edge of providing integration services to many of the mobile and E-wallet applications introduced to the marketplace. Our ability to provide a one-stop complete solution for system design, implementation assistance, software development, custom modifications, training and support services has been our hallmark.

Custom APIs

Our payment domain knowledgeable staff have developed many customized APIs for developers and merchants alike looking for extras like "reverse tokenization" and specific programming languages like PHP, .NET, PEARL and JAVA.

Branded Products

Intrix develops all of their products with the intent of white labeling them to other ISOs, Agents, Processors, VARs and ISVs. Historically we have branded; payment gateways, virtual terminals, accounting plug-ins including the documentation and setup guides.

Industry Specific Gateways

In many cases payment gateways can be used to satisfy industry specific needs in Industries like property management, education, health care, etc. Intrix has developed and managed several of these industry specific gateways for their customers.

Accounting Plug-ins

In addition to the Quick Books plug-in developed and widely sold through partners across the US, Intrix has integrated with several other industry specific accounting applications including; Tessitura Software, Infor SyteLine, Omega Fi and many others.
